Question: In Microsoft Access 2007, I'd like to retrieve only the first 6 records from a query. How can I do this? Answer: We'll demonstrate how to do this with an example below. We have a query as follows: As you can see that we get more than 6 records returned. To limit the results of this Access query to only display the first 6 records, we need to open the query in Design view.

The runtime versions are similar to their corresponding full version of Access and usually compatible with earlier versions; for example Access Runtime 2010 allows a user to run an Access application made with the 2010 version as well as 2007 through 2000. Due to deprecated features in Access 2013, its runtime version is also unable to support those older features. …
